

YACOURB_INHERITED

SHARED_INTERFACE

OBID_CREATED

Inherited workflow-to-action infrastructure

Existing workflows, actions and integration components

CONFIG-BASELINE

Inherited minimal agent stateless comparator
Contextual baseline only

Middleware / action API
Inherited endpoint stecution

n8n, action API and delivery to hardware

Simulated fan state

Evaluation boundary only
No new physical Pi evidence produced

Sensor-event contract

Agreed schema and event semantics

Four-field action contract

(action, value, id, source)

Compatible endpoint meanings

Shared understanding of endpoints

CONFIG-OBID Decision Layer

- Decision Agent
- Two read-only tools
- Two-interaction bounded memory
- Internal structured decision

Runtime Release Control

- Action validation
- Deterministic policy
- HITL when required

BLOCK / ALLOW / APPROVAL_REQUIRED

Inherited Middleware / Action API Endpoint

Release of approved actions to inherited infrastructure

Simulated Fan State

Evaluation boundary only
No new physical Pi evidence

Controlled Evaluation Layer

Paired configurations, repeated runs, evidence capture and processing

*Support / Observational
(No effect on runtime decision or release)*

- Operational flow (OBID-created extension)
- Shared interface (unchanged collaboration boundary)
- Inherited runtime flow

- Context / comparator (baseline only)
- Evaluation & support (no influence on runtime decisions)
